

**ANTISENSE HUMAN FUCOSYLTRANSFERASE SEQUENCES
AND METHODS OF USE THEREOF**

Abstract of the Disclosure

5 The present invention provides oligonucleotides that hybridizes to a nucleic
acid that encodes a fucosyltransferase (FUT). The fucosyltransferase is preferably
FUT3 or FUT6, along with vectors that contain the same. Pharmaceutical
formulations that contain such oligonucleotides or vectors are also provided, along
with methods of use thereof in the treatment of cancer.
